## Three Days Workshop on Research Data Analysis Using 'R'

### About the Programme:

Research is a systematic process of collecting and interpreting data to generate knowledge and aid in decision-making. The workshop, "Research Data Analysis Using 'R'", aims to provide practical training in R programming to enhance participants' skills in statistical analysis and data visualisation. R is favoured for its open-source nature and extensive package ecosystem, making it accessible and flexible for various research applications. The workshop covers programming fundamentals, data management, statistical analysis, and reproducible research practices, emphasising real-world applications to help participants build confidence in using R for their research needs. This initiative targets beginners and addresses gaps in exposure to statistical software, aligning with R's growing prominence in academic and industry settings.

### Objectives of the Training Programme:

- Develop a foundational understanding of R programming and statistical computing;
- Gain practical skills in data management, visualisation, and statistical analysis;
- Learn to apply R in healthcare, labour studies, and health economics research;
- Understand reproducible research practices and analytical workflows;
- Build confidence in using open-source software for academic and policy-oriented research.

### Eligibility Criteria:

The faculties and enrolled PhD Scholars belonging to the Social Science disciplines from UGC-recognised universities/deemed universities, colleges/institutes of national importance, and ICSSR research institutes.

### Intake:

The maximum intake for the Course shall be 30 seats. Notification to selected candidates will be sent to the registered email address.

**Note: Laptop is mandatory for the participants.**
